ORGANIZERS

Reading the activity log

Who changed what, and when, in your event. Filter by person, kind of change or time.

Updated 24 October 2026 1 min read

Open **Activity**. Every change to your event is written here, newest first: "You issued a code", "Front desk changed the courts".

The activity log.

Filters

- **Who**: anyone, the organizers, any desk, any referee, or one code by its name.
- **What**: results, courts and order, referees on matches, entries, codes, publishing, support, ties and lineups.
- **When**: the last hour, the last 24 hours, or everything.
- **Show**: 25, 50 or 100 at a time.

What it does and does not hold

It records **who** and **what kind of change**. It does not hold people's names from your draw: an entry change says "you changed an entry", not whose. That keeps the log from being a second copy of your draw.

A result, a court, a referee, a code, a publish and a reset all appear. So does every time rallyxrally's support has looked at your event, and for how long. That is the one place you can always check.

Using it on the day

When something looks wrong, filter **What** to the kind of change, and **When** to the last hour. The name next to the change is the code that made it, which is why codes have names.
